

MATH GUIDE FOR PARENTS

Math looks a little different from when we went to school. Here are some pointers to help you understand what your child is doing in Math:

1. Number bonds

Use the "parts" to make the "all" like this

$$6 + 3 = 9 \quad \text{or} \quad 3 + 6 = 9$$

Also use the number bond for subtraction like this:

$$9 - 3 = 6 \quad \text{or} \quad 9 - 6 = 3$$

2. 5 group way

- Refers to drawing shapes in groups of 5 like this:

for the number 7.
